Clear writing makes a good case for actual help with the future pollution

By Dorothy Kitchen

This book, written by a Japanese ecology specialist and an American who has studied marine ecology both in Tokyo and in America is one of the most readable cases put forth for what we can actually do to assist in the transformation of the world so we can all continue to live in it and our children and grandchildren can continue to thrive. I read it in amazement. There is lots of it which is very technical and I must admit I skipped that, but the summarizations and the precis of contents which appear before all the technical data are coherent, believable, and practical. I keep this book in my teaching studio so that all can skim it and get some idea of how we can move forward from the over use of all the resources of our world.

Dorothy Kitchen, Duke University

a convincing case for sustainability

By Louise T. Taylor

Like a Japanese Ben Franklin, Professor Komiyama is an astute observer, who makes clear in concrete examples how human civilization has evolved to a point where we are changing the living conditions on our planet. And like Franklin, he offers solutions- detailed, concrete solutions covering everything from engineering to ecology to economics. Vision 2050 makes the case for why we must change our patterns of consuming energy and natural resources, but offers realistic hope that with better technology and informed policy, we can restore the balance on our planet and achieve a good standard of living for peoples in all countries.

When Vision 2050 was being translated, I was asked for some editorial suggestions; however, I was not paid

for this service and have no economic interest in the book.
